SECTION 11: TOXICOLOGICAL INFORMATION

POTENTIAL HEALTH EFFECTS

FOTENTIAL HEALTH EFFECTS			
Likely Routes of Exposure	See below		
EYE	May cause irritation (tear formation and redness) if dust gets in eyes.		
SKIN	Not absorbed by the skin, but may cause dryness if prolonged exposure.		
INGESTION	Ingestion of small quantities is not considered harmful, but may cause irritation of the mouth, throat and stomach.		
INHALATION	Acute inhalation can cause dryness of the nasal passage and lung congestion, coughing and general throat irritation. Acute inhalation of high concentrations of respirable crystalline silica may cause acute silicosis.		
CHRONIC EFFECTS	This product contains naturally occurring crystalline silica. Respirable crystalline silica may cause lung cancer and lung disease (silicosis) if inhaled for prolonged periods. Symptoms of silicosis include wheezing, cough and shortness of breath.		
CARCINOGENICITY	This natural product is composed predominantly of clay, but contains some crystalline silica. Respirable crystalline silica (quartz) is classified by IARC and NTP as a known human carcinogen. Crystalline silica is only known to cause cancer when inhaled in a respirable form. It is not known to cause cancer by any other route of exposure.		
NTP	Respirable crystalline silica (quartz) is classified as a known human carcinogen.		
IARC	Respirable crystalline silica (quartz) is classified as a known human carcinogen.
