

# ***Gym Gem Plus***

## **Urethane Fortified High Performance Wood Finish** By **Wayne®**

### **Requires no catalyst**

Internally catalyzed. New generation urethane/polymer technology cures to a tough, durable coating without separate additives. Eliminates mixing and mistakes.

### **Reduces down time**

Floors can be prepped and double coated in one day. Back in service the next.

### **Lasting beauty**

Super tough urethane stands up to heavy usage. Develops a deep, rich gloss with exceptional resistance to black marks, scuffs and abrasion.

### **Repairable**

Surface marks easily removed with high speed burnishing.

### **Solvent Free**

No pungent solvent odors. Nonflammable. Low VOCs.

Preparing and finishing a gym floor is a big task. One mistake made measuring or mixing two component finishes can ruin the whole job. Incomplete mixing, adding catalyst too quickly or not allowing sufficient reaction time before using can result in application problems, uneven cure and excessive marking. Once catalyzed, finishes must be used within a few hours ... or discarded.

Wayne Gym Gem Plus is made of new generation, self-reacting polymers that require no external catalyst to achieve complete cure. It is supplied ready-to-use ... right out of the container. No measuring, no mixing, no waiting, no wasted product and, best of all, no mistakes.

### **Product Description**

A single component, self-catalyzing water borne urethane/silanol-silene polymer emulsion formulated for use on gym, handball and other athletic wood floors. Gem Gem Plus is suggested as a performance offset to oil modified solvent based wood finishes.
