## Traffic Lane Defender Carpet and Fabric Treatment

### **Improves appearance ...**

### **Reduces labor**

TLD forms an invisible barrier that retards particulate soils from adhering to carpet fibers. Treated dirt and grit accumulate in traffic paths resulting in discolored lanes and accelerated wear caused by abrasive grit that cuts fibers at the backing. TLD improves the efficiency of routine vacuuming, removes more dirt with fewer passes and reduces damage from embedded grit.

### **Superior oil and water based stain resistance.**

### **A must for cafeterias, break and meeting rooms.**

TLD provides outstanding resistance to stains from coffee, tea, sports drinks, colas, wine and food. It prevents spills from being absorbed into fibers, so wet spills can be blotted clean and dried spills are more responsive to spot removers. TLD prevents most spots from becoming permanent stains.

### **Saves labor ... Fewer extractions ... Better results.**

TLD is so effective at optimizing soil removal by dry vacuuming, the frequency of deep extraction cleaning can be reduced. And, when deep cleaning is required, TLD acts as a barrier release agent to achieve thorough cleaning with less aggressive scrubbing and cleaning solution.

### **Safer and Easier to Use**

TLD is a water based emulsion formulated without petroleum solvents or silicones. TLD is non-flammable, generates no VOC's and complies with standards for EPA PFOA stewardship program. TLD can be applied to any fabric not affected by water and may be used to restore stain resistance to older, stain resistant carpet. TLD can be effectively used immediately after extraction or on clean, dry carpet.

**Product #:** J11TLD1: 1 Gallon, Packed: 4-1 gallon per case.

**Manufactured by:**

**Wayne Concept Manufacturing Co., Inc.**

**Fort Wayne, IN 46825     260-482-8615**

*Serving the maintenance community since 1933*
